SPIRITS

OUZO

ούζο

ouzo has its roots in tsipouro, which is said to have been the work of a group of 14th-century monks on mount athos. one version of it was flavoured with anise. this version eventually came to be called ouzo. modern ouzo distillation largely took off in the beginning of the 19th century, following greek independence.

APERITIF & DIGESTIF

an apéritif is an alcoholic beverage usually served before a meal to stimulate the appetite and is therefore usually dry rather than sweet.

digestifs come in a rainbow of flavors and colors, but they're all intended to do one thing: help you digest, and possibly find an excuse to take another small nip. unlike aperitifs, which are often more acidic, bitter, or bracing to whet the appetite, digestifs tend to incorporate depth, spice, herbs, bitterness, and sweetness. aperitifs are also usually lower in alcohol.

VODKA

vodka may be distilled from any starch- or sugar-rich plant matter and most vodka today is produced from grains such as sorghum, corn, rye or wheat. among grain vodkas, rye and wheat vodkas are generally considered superior.

RUM & CACHACA

rum is made by fermenting then distilling sugarcane molasses or sugarcane juice. the distillate, a clear liquid, is usually aged in oak barrels. most rums are produced in caribbean and american countries, but also in other sugar producing countries, such as the philippines, india & australia.

GIN

gin likely traces its origins to liquors produced back in the middle ages, with references to a spirit flavored with “genève”, referenced in a 13th century flemish manuscript. by the 1600s, the dutch were producing gin in earnest, with hundreds of distilleries in the city of amsterdam alone.

gin is usually produced at between 35 and 47% alc./vol., with the lower end of this spectrum mainly affected by the prevailing laws in particular markets. many gin brands also have a higher strength bottling, often termed navy strength, aimed at the duty-free market and these are typically the high forties to 50% alc./vol.

WHISK(E)Y

the word whisky comes from the gaelic 'uisge beatha' or 'water of life'. made from a fermented grain mash, it can only be classified as 'scotch' if it was made in scotland. australia, canada and japan all use the term whisky (without an 'e').

whiskey (with an 'e') is produced in the united states and the primary types of american whiskey are bourbon whiskey, rye whiskey, rye malt whiskey, malt whiskey, wheat whiskey, tennessee whiskey, and corn whiskey.

TEQUILA & MEZCAL

tequila is a regional specific name for a distilled beverage made from the blue agave plant, primarily in the area surrounding the town of tequila and los altos, the highlands of the central western mexican state of jalisco, although also in the states of guanajuato, michoacán, nayarit, and tamaulipas. tequila is mezcal, although mezcal isn't tequila. modern tequila differs somewhat in the method of its production, the use of only blue agave plants, regional specificity, cooking style and other methods.

LIQUEURS

composed of distilled spirits and additional flavoring such as sugar, fruits, herbs, and spices. often served with or after dessert, they are typically heavily sweetened. liqueurs are historical descendants of herbal medicines and were made in italy as early as the 13th century, often prepared by monks. today they are produced the world over, commonly served straight, over ice, with coffee, in cocktails or used in cooking.
